

## **AB-410: Building Intelligent Applications**

### Create a foundation for intelligent applications (25–30%)

#### Design Microsoft Power Platform solutions by using AI-enabled tools

- 1 Analyze requirements to identify components and options for implementation
- 2 Evaluate built-in agents to include in the business solution
- 3 Recommend extensibility options
- 4 Recommend environment types
- 5 Apply a Microsoft Power Platform solution and ALM strategy

#### Build data models

- 6 Create and edit tables in the data workspace
- 7 Create and modify standard tables
- 8 Configure table properties
- 9 Create and modify columns
- 10 Configure table relationships
- 11 Configure prompt columns
- 12 Configure row summaries
- 13 Configure public views
- 14 Configure main forms
- 15 Configure security

### Create intelligent applications (25–30%)

#### Create model-driven apps

- 16 Create and configure forms for model-driven apps
- 17 Create and configure views for model-driven apps
- 18 Create generative pages by using natural language
- 19 Compose a model-driven app
- 20 Configure access to forms and views for model-driven apps
- 21 Configure access to model-driven apps
- 22 Create and configure model-driven app charts and dashboards

#### Create canvas apps

- 23 Create a canvas app using data
- 24 Design apps for accessibility, performance, responsiveness, and usability
- 25 Automate business processes from canvas apps
- 26 Create reusable components, including named formulas, user-defined functions, and component libraries
- 27 Manage variables and collections
- 28 Implement error handling
- 29 Test canvas apps, including using Monitor
- 30 Create a Copilot Studio agent from a canvas app

## **AB-410: Building Intelligent Applications**

### **Build business application logic and automation (40–45%)**

#### **Create cloud flows**

- 31 Recommend cloud flow triggers
- 32 Evaluate and recommend connectors
- 33 Manage approvals by using cloud flows
- 34 Configure cloud flow actions
- 35 Implement flow control with conditions and loops
- 36 Test and troubleshoot cloud flows

#### **Create prompts and models in AI Hub**

- 37 Build prompts from templates or from blank
- 38 Consume a prompt in apps
- 39 Consume a prompt in cloud flows
- 40 Add knowledge to a prompt
- 41 Customize prompt settings, including models
- 42 Add inputs to a prompt
- 43 Consume an AI model in apps
- 44 Consume an AI model in cloud flows

#### **Implement business and process logic**

- 45 Configure business rules
- 46 Configure business process flows
- 47 Configure calculated, rollup, and formula columns
- 48 Evaluate use cases for business logic
